-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-4, 6-14 and 17-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Couture et al. (US Patent 5,438,228) in view of Heinen (WO 01/54939 A).

Couture et al. teaches a wheel having a rotational axis, a first radius extending from the rotational axis to an exterior surface of the wheel; an electric motor that directly drives the wheel; a gap situated around the rotational axis between a rotor and a stator; the motor exerts torque that fully and automatically drives the wheel, the torque having an arm extending from the rotational axis to a surface of the gap. RE claims 6 and 7 see magnetic means 26. RE claims 11-14 see shaft 2. RE claim 18 see tire 32.

Couture et al. lacks the teaching of a traction ratio which is larger than 0.57.

Heinen teaches a low thickness tire with a diameter of 800m.

Based on the teachings of Heinen, it would have been obvious to one having ordinary skill in the art to include tire options which lead to a traction ratio greater than 0.57 because the ratio substantially depends on the thickness of the tire. One of ordinary skill in the art would as a routine action assembly known drive units with all kinds of tires.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to BRIDGET AVERY whose telephone number is (571)272-6691. The examiner can normally be reached on Monday-Thursday from 8 AM to 5:30PM.
